

Figure B8a. The distribution of all pale ghost shark (left panel) caught (grey dots) and those examined for diet (black dots) in research trawls 1960–2000. N, number of fish examined for diet.

Note: Challenger sample not included, appears to be total length not chimera length

Figure B8b. The length frequency of pale ghost shark where feeding data was recorded. Fish with empty stomachs are presented as white bars and fish containing prey items as black bars. Areas are defined on p. 9. n, number of fish examined for diet.

Figure B8c. The importance of major prey groups in the diet of pale ghost shark examined on research trawl surveys. Fish size groups are arbitrary designations. n, number of fish examined for diet.
